Project: Northstar notes.

Meeting: Tuesday at 14:00 in Room 4.

Project owner: Mira Patel.

Review deadline: 18 March.

The team should bring the architecture draft.

The service extracts PDF text with pypdf.

Text chunks contain 500 characters with 100-character overlap.

Embeddings use all-MiniLM-L6-v2.

FAISS stores vectors; metadata JSON stores file names and page numbers.

POST /ingest accepts PDF uploads. POST /ask receives questions. GET /health reports status.

Ollama is the default LLM provider.

If documents do not contain an answer, reply: I don’t know based on the provided documents.

Retrieval returns the top four chunks by default.
